

# Monoblock

## With flange connection

### Models IBF2 and IBF3

WIKA data sheet AC 09.25

EAC

#### Applications

- Oil and gas industry, chemical and petrochemical industries, power plants
- For gaseous and liquid aggressive media that are highly viscous or crystallising, also in aggressive environments
- Direct connection of pressure measuring instruments to flanged pipelines or vessels without interface valves
- Shut-off valve with draining or venting function as tapping point for instrumentation
- Attached to level indicators or differential pressure instruments in level measurement

#### Special features

- Increased safety with metal enclosed seats and double body seal
- High-quality machining guarantees smooth operation with low torque and low wear
- Leak-tested tightness in accordance with BS6755 / ISO 5208 leakage rate A
- Customisable arrangement with ball and needle valves
- Customer-specific combination of valves and instruments (hook-up) on request

#### Description

The monoblock has been designed to meet the requirements of the process industry, especially for natural gas and aggressive fluid applications. The compact design integrates one or two shut-off valves to separate the process from the instrument side and a vent valve.

The modular monoblock design allows using an arrangement of ball valves and/or needle valves. For applications with liquid or dirty media, ball valves are recommended due to easy cleaning of the straight-through internal bore.

The valve seat design and the redundant seals of the valve body ensure high durability and tightness.

**Fig. left: Model IBF3, with flange connections**  
**Fig. right: Model IBF3, flange process connection and threaded instrument connection**

In case the soft valve seat fails, the metal-to-metal seat will ensure that the valve can still be operated and set to a safe position. The tightness is guaranteed for the connection between the process and the measuring instrument and towards the atmosphere.

The super-finished machining of the internal parts allows a very smooth and precise operation, even at high pressures and after long periods without valve operation. The surface finish is also minimising corrosion with aggressive media and makes it easier to clean.

Valve fittings, ball, valve seats, valve stem, bonnet body, spindle tip	<ul style="list-style-type: none"> <li>■ Stainless steel 316/316L (1.4401/1.4404)</li> <li>■ Duplex F51 (1.4462)</li> <li>■ Super Duplex F55 (1.4501)</li> <li>■ Hastelloy C276 (2.4819)</li> <li>■ Monel 400 (2.4360)</li> </ul>
Sealing	<ul style="list-style-type: none"> <li>■ PEEK (ball valve seat)</li> <li>■ RTFE (ball valve seat)</li> <li>■ Graphite (needle valve sealing packing)</li> </ul>
<b>Non-wetted parts</b>	
Handle, bonnet, spindle, locking plate, locking pin, product label, screws	Stainless steel
Handle grip	PVC

1) Valve body from carbon steel ASTM A350 LF2, the other wetted parts from stainless steel 316/316L (1.4401/1.4404). Unpainted carbon steel valves have an oil finish for corrosion protection during storage. This is not a substitute for paint or other protective coating to be applied at the place of use.

## Pressure-temperature diagram

	Sealing material	Max. permissible operating pressure in bar at temperature in °C	Max. permissible operating pressure in psi at temperature in °F
Ball valve seat	PEEK <sup>1)</sup>	690 bar at 38 °C	10,000 psi at 100 °F
		276 bar at 260 °C	4,000 psi at 500 °F
	RTFE <sup>2)</sup>	210 bar at 38 °C	3,000 psi at 100 °F
		138 bar at 204 °C	2,000 psi at 400 °F
Needle valve sealing packing	Graphite	420 bar at 38 °C	6,000 psi at 100 °F
		209 bar at 538 °C	3,030 psi at 1,000 °F
	PTFE	690 bar at 38 °C	10,000 psi at 100 °F
		276 bar at 204 °C	4,000 psi at 400 °F

1) Polyetheretherketone

2) Reinforced PTFE

The minimum design temperature is -54 °C [-65 °F]. For permanently low operating temperatures of  $\leq -54$  °C [ $\leq -65$  °F], a special design is required.

## Installation examples

### Model IBF3 with pressure gauge

Shut off: 2 x ball valve  
Vent: 1 x needle valve

Process side: Flange  
Instrument side: Thread

### Model IBF3 with diaphragm seal system

Shut off: 2 x ball valve  
Vent: 1 x needle valve

Process side: Flange  
Instrument side: Flange

## Arrangement examples

### Model IBF3

Shut off: 2 x ball valve  
Vent: 1 x needle valve

Process side: Flange  
Instrument side: Thread

### Model IBF3

Shut off: 2 x ball valve  
Vent: 1 x ball valve

Process side: Flange  
Instrument side: Thread

### Model IBF2

Shut off: 1 x needle valve  
Vent: 1 x needle valve

Process side: Flange  
Instrument side: Thread

### Model IBF2

Shut off: 1 x ball valve  
Vent: 1 x needle valve

Process side: Flange  
Instrument side: Thread
