

Weld-in thermowell Model TW25

WIKA data sheet TW 95.25

Applications

- Petrochemical industry, on-/offshore, plant construction
- For high process loads

Special features

- Variable welding diameters
- International standard
- Possible thermowell designs:
 - Design TW25-A: Tapered
 - Design TW25-B: Straight
 - Design TW25-C: Stepped

Weld-in thermowell, model TW25

Description

Each thermowell/protection tube is an important component of any temperature measuring location. It is used to separate the process from the surrounding area, thus protecting the environment and operating personnel and keeps aggressive media, high pressures and flow rates from the temperature probe itself and thereby enables the thermometer to be exchanged during operation.

Based on the almost limitless application possibilities, there are a large number of variants, such as thermowell designs or materials. The type of process connection and the basic method of manufacture are important design differentiation criteria. A basic differentiation can be made between threaded and weld-in thermowells/protection tubes, and those with flange connections.

Furthermore, one can differentiate between protection tubes and thermowells. Protection tubes are constructed from a tube, that is closed at the tip by a welded solid tip. Thermowells are manufactured from solid bar stock.

The TW25 series of weld-in thermowells are suitable for use with numerous electrical and mechanical thermometers from WIKA.

Due to the heavy-duty design, these international design thermowells are the first choice for use in the chemical and petrochemical industries and in plant construction.

Specifications

Basic information	
Thermowell form	
Design TW25-A	Tapered
Design TW25-B	Straight
Design TW25-C	Stepped
Material (wetted)	<ul style="list-style-type: none"> ■ Stainless steel 316/316L ■ Stainless steel 304/304L ■ A105 ■ Stainless steel 1.4571 ■ Special materials
	→ Other materials on request

Process connection		
Type of process connection	Welding diameter (Bar diameter) to customer specification from 25.4 ... 49.5 mm [1 ... 1.95 in]	
Connection to thermometer	<ul style="list-style-type: none"> ■ ½ NPT female thread ■ G ½ female thread 	
	→ Other threads on request	
Bore size	<ul style="list-style-type: none"> ■ Ø 6.6 mm [0.260 in] ■ Ø 8.5 mm [0.355 in] 	
Insertion length U	<ul style="list-style-type: none"> ■ 100 mm [2.5 in] ■ 150 mm [5.9 in] ■ 200 mm [7.87 in] ■ 250 mm [9.84 in] ■ 300 mm [11.81 in] ■ 350 mm [13.78 in] ■ 400 mm [15.75 in] 	
	<ul style="list-style-type: none"> ■ 6 in [152 mm] ■ 7 in [178 mm] ■ 10 in [254 mm] ■ 13 in [330 mm] ■ 16 in [406 mm] 	
	→ Other insertion lengths on request	
Min. insertion length	Depending on the selected version	
Max. insertion length ¹⁾	800 mm [31.5 in]	
Connection length H	45 mm [1.75 in]	
Min. Connection length	Depending on the selected version	
Max. Connection length	250 mm [10 in]	
Tip thickness	6.4 mm [0.25 in]	
	→ Other tip thicknesses on request	
Suitable stem lengths I₁ (dial thermometer) with tip thickness 6.4 mm [0.25 in]		
Connection design S, 4, 4.1, 5, 6.1, 6.2, 6.3 und 7	Parallel thread	$I_1 = U + H - 10 \text{ mm [0.4 in]}$
	Tapered thread	$I_1 = U + H - 2 \text{ mm [0.08 in]}$
Connection design 2		$I_1 = U + H - 30 \text{ mm [1.2 in]}$

1) Longer insertion lengths in one-piece design are dependent on the geometry and material, and are possible up to 1575 mm (62 in) on request. Basically, from an insertion length of 800 mm (31.5 in), a multi-part assembly in accordance with IN 00.16 is carried out, unless otherwise requested. A wake frequency calculation in accordance with ASME PTC 19.3 TW-2016 requires compliance with the requirements of the above-mentioned standard.

Operating conditions	
Max. process temperature, process pressure	<p>Depending on:</p> <ul style="list-style-type: none"> ■ Thermowell design <ul style="list-style-type: none"> - Dimensions - Material ■ Process conditions <ul style="list-style-type: none"> - Flow rate - Medium density
Wake frequency calculation (option)	<p>The calculation in accordance with ASME PTC 19.3 TW-2016 of individual thermowells minimises the risk of dynamic damage that can be caused by the vortex shedding of a Kármán vortex street (Vortex Induced Vibration; VIV).</p> <p>In addition, the static loads due to lateral flow and the process pressure are calculated depending on the temperature.</p> <p>The calculation can be carried out independently using an online tool or as a WIKA engineered service (subject to charges).</p> <p>→ For further information, see Technical information IN 00.15 "Wake frequency calculation".</p>

Certificates (option)

Certificates	
Certificates	<ul style="list-style-type: none">■ 2.2 test report■ 3.1 inspection certificate

Approvals and certificates, see website
